# Notebooks and RMarkdown

SLU DSS 6: Reproducible Research in R
October 3rd, 2018

## Find Seminar Resources at:
## https://github.com/slu-dss

The repository for this week is called research-03. Download it to your desktop by going to the repo on GitHub and reading through the README file you can see below the repo contents.

There are two code snippets under Lesson Quick Start to copy and paste into RStudio's console – one for installing all the necessary software and one for downloading and opening the course materials. When prompted, you want to move the data to your desktop and you can delete the original .zip file!

### Agenda for Seminar 03:
- Announcements
- R projects
- R notebooks and R markdown
- Writing data

Extra resources: We've posted links to some extra resources for getting started with reading data into R in the README.md file in this week's repository.

Next date: Wednesday, October 17th (1pm to 2pm)
